Weblink Communications Ltd. has designed the network to Manage data range up to Gigabits.

DATA & NETWORK STORAGE INFRASTRUCTURE ASSESSMENT & OPTIMIZATION

The human need and capacity to imagine..... to discover..... to create..... and build relationships is based largely on the use and exchange of information. We believe that information is a business's most important asset. Ideas and the people who come up with them are the only real differentiator. We will provide solutions that meet and exceed your most demanding business and IT challenges. We will bring your information to life.

DISASTER RECOVERY SOLUTION

Disaster recovery is becoming an increasingly important aspect of enterprise computing. As devices, systems, and networks become ever more complex, there are simply more things that can go wrong. Current enterprise systems tend to be too large and complicated for such simple and hands-on approaches, however, an interruption of service or loss of data can have a serious financial impact, whether directly or through loss of customer confidence. No matter what your company size, disaster recovery (DR) plans for remote offices and branch offices (ROBO) must be part of your organization's DR initiative.

- Customer satisfaction survey
- Sales support
- Order fulfilment
- Conference & registration
- 3rd party verification
- Product launches

NETWORK & TECHNOLOGY

Fiber Optics: The Fiber we have used is multiple cores. Only one core will be used for clients. The capacity is gigabits per sec. We have used SFP Switches to connect the Cores in our POPs to avoid data loss due to Media Converter, Patch Cord etc. All products are international standards and have high-quality performance. The system bit rate is more than 1GB. This fibre throughput is optimized for heavy loading, so the throughput does not degrade as more subscribers are added. This is 1000 times faster than a radio link. And the cable has a strong jacket outside to keep it safe from external interference.

Radio Link connectivity: We are working with radio technology since 2002. We have towers in different locations of Dhaka city to cover the whole of Dhaka and the surrounding area. We are providing wireless connectivity with a world-class Motorola canopy. We have deployed 23 pairs of P2P wireless devices for redundancy of Fiber Optics.

Switches: World-class Cisco switches are introduced in the Network for maintaining Layer 2 clear channel VLAN connectivity. Using 23 Pcs of Switches we have made several rings in the network to ensure link Redundancy.

Routers: EoIP and MPLS supportable world-class MikroTik Router is being used in the Network to ensure maximum data security. These routers also support VPN, Bandwidth Management, HTTP Filter, BGP and OSPF.

Power Back-up: All POPs are ensured 99% uptime by introducing High end long back up (2 Hours) Online UPS (APC Brand) with redundant long back up (4 Hours) IPS. All POPs are ensured 99% uptime by introducing High end long back up (2 Hours) Online UPS (APC Brand) with redundant long back up (4 Hours) IPS.

WEBLINK COMMUNICATIONS LTD. is an Internet Infrastructure for Networking Requirements of the domestic enterprise market. Partnering with world leaders we provide state-of-the-art products and solutions for the network requirements of organizations of all sizes
